Hook:

To explore without limits, push boundaries, skillfully cover more ground with speed, and experience the backcountry in a way few have the courage to attempt…

There wasn't a backpack made for that … until we decided to make one.

Problem:

It all started with our new obsession:

When we learned about fastpacking (basically, backpacking while covering miles as quickly as possible, often running to do so), we at OV became possessed.

We challenged ourselves and each other to run more and hike further, eventually training to cover 30+ miles a day in an overnight trip.

Having had thousands of miles and hundreds of nights in the backcountry under our belts, we knew that a regular hiking backpack, no matter how well-designed, couldn't function optimally with all of the running involved, and the typical running vest couldn't carry all your gear for a multinight trip. We didn't need a workhorse of a pack, we needed the Lamborgini.

So, we tried out nearly every "fastpack" on the market. And in one way or another, every pack was a disappointment:

Some bounced uncomfortably while in motion, others caused excessive rubbing & chafing, & others just didn't have the right features to give us access to gear when we needed it most.

After nearly two years of intensive development, thousands of miles of rigorous testing, and the creation of dozens of prototypes, tuning to perfection every little feature to be just right, the Skyline 30 Fastpack is finally here.

Solution:

The Skyline 30 Fastpack is the ultimate companion for those with a different kind of drive - to actually check things off their bucket list, to go further & connect more deeply with their surroundings. Those that take a 3-day weekend & fill it with a week's worth of adventure.

Features:

The Skyline 30 Fastpack is made to handle all-day, on-the-move efforts, giving you easy access to hydration and fuel. It's small and light, with just enough space and flexibility for a two-night trip in the mountains, and, most importantly, it's designed to be stable and remain comfortable while you move:

The Skyline boasts a carefully crafted shoulder harness suspension system that optimally distributes your pack weight, even during intense movement. No more uncomfortable bouncing or unnecessary fatigue. It feels like an extension of your body with full adjustability to your unique shape.

The Challenge UltraStretch mesh used for the back panel, side, and bottom pockets is both ultralight and durable. It's practically indestructible yet super lightweight, allowing you to stuff your gear wherever you want without worrying about wear and tear. The pack's 30 liter capacity allows you to have everything you need where you need it, whether that's for 2 days on the trail or a quick blitz to a peak.

But that's not all. The unique bottom pocket is a game-changer. With its pass-through sleeve and zippered mesh compartment, you can stash your essentials within arm's reach while keeping them safe and secure.

Every inch of this pack is intentionally designed, from the perforated foam back panel that molds to your body for a perfect fit to the versatile pocketing on the harness system that ensures your gear stays exactly where you want it.

Credibility:

Brought to you by the same team that created the legendary Shadowlight backpack and the renowned CS40 Ultra backpack, the Skyline 30 Fastpack is the result of dedication, innovation, and countless miles of rigorous testing. We've fine-tuned the Skyline to near perfection, scrutinizing every detail to create a pack that won't just meet your needs but exceeds your greatest expectations.

Call To Action:

Don't let long distances and limited timelines hold you back from the destinations you crave. The Skyline 30 Fastpack unlocks new levels of exploration, whether you're a dedicated backcountry athlete, a dialed-in ultralighter, a time-constrained weekend warrior, or someone who just wants to push the limits outdoors.

Experience the freedom of fastpacking with a pack that matches your intensity & drive.
